An Overview of Data Unloading in Snowflake

Step-By-Step Guide

5201 GREAT AMERICAN PARKWAY, SUITE 320 SANTA CLARA, CA 95054 Tel: (855) 695-8636 E-mail: info@lumendata.com Website: www.lumendata.com

- Snowflake supports data unloading from a database table to files. It allows us to perform bulk unloading as well as using PARTITION BY.
- Snowflake supports unloading the data into local machines, internal stages, and external stages (AWS, AZURE, and GCP).

It supports downloading the data into a few file formats like CSV, TSV, JSON, and PARQUET with a UTF-8 file encoding mechanism.

Note: We need a virtual warehouse to unload the data from Snowflake.

Let's unload the data from the Snowflake table to the local PC by the internal stage and to the external stage.

Unloading data into local PC by internal stage

• We have data in the Snowflake table named "EMPLOYEE_PERSONAL_DETAILS".

Databases Worksheets	20 20	ACCOUNTADMIN · COMPUTE_WH	Share	• •
Period (0) No plined objects Q, Search objects ✓ (0) SAI ✓ (0) SAI ✓ (0) SAI ✓ (0) PUBLIC	SALPUBLO = Semings = SALPUBLO = Semings = select * from EMPLOYEE_PERSONAL_DETAILS: show stages: show stages: 24 25 26 27		Code Versions	٩

	 a b) b) c) c)	EMPLOYEE, DAME 1 EMPLOYEE, DAME 1001% filled	é	# 4 6

• Let's unload the data in the table to the internal stage named "SAI_INTERNAL_STAGE".

Databases Worksheets	-0 -0							ACCOUNTADMIN	· COMPUTE_WH	Share	•
Pinsed (0)	SALPUBLIC + Settings +									Code Versions	. q
